FARLOW HERBARIUM OF HARVARD UNIVERSITY

CAMBRIDGE, MASSACHUSETTS

INDEX TO THE MOSS HERBARIUM

OF WILLIAM STARLING SULLIVANT (1803-1873)

History of the Herbarium

The Sullivant collection was transferred to Harvard from Columbus, Ohio, in 1874. Joseph Sullivant's letter of transmittal stated that it was "with the understanding this herbarium is not to be broken up and distributed among other herbaria but is to be kept together as Sullivant Collection" (31 July 1874). With the herbarium was his library, manuscripts, and correspondence, though some of the latter was either withheld or lost. The herbarium proper was in 47 leather covered boxes, but, as it turned out, this was only the "working" herbarium. Sullivant left in "bundles" any specimens he did not need for comparison, as well as collections from large expeditions and exsiccata sets, and he disposed of many American specimens by gift or in his own exsiccatae, keeping only a few representatives of each species. Leo Lesquereux had made use of the herbarium before it was shipped for his Icones Muscorum Supplement, and at the Gray Herbarium T. P. James used it freely for the Manual of Mosses of North America and sorted the Spruce American bundles, but otherwise the herbarium was left relatively undisturbed during this time.

In October, 1899 all the cryptogams of the Gray Herbarium were transferred to the Botanical Museum, to the quarters of W. G. Farlow, who had amassed a large personal herbarium and who had become Professor of Cryptogamic Botany in 1879. Farlow employed Lucius M. Underwood to rearrange and re-label the hepatics and J. F. Collins the mosses according to then-current standards. Many of the bundles were incorporated. Nothing was discarded, even empty packets and ambiguous notes were saved.

The last move of the herbarium was in 1919, when the Farlow Library and Herbarium was established in the present building. Since that time, somewhat random alterations of both arrangement and nomenclature have occurred. In 1948-1949, an unknown quantity of material from the unincorporated bundles, which seemed to the director beyond the capacity of the Farlow to make use of, was given to other institutions and individuals. In 1980-1982, the herbarium was completely remounted and an attempt was made to standardize the nomenclature into a state consistent among its parts and with Sullivant's publications.

Description of the Herbarium

There are some 10,800 specimens in the main Sullivant herbarium and over 4000 in special collections not incorporated. (Adding over 4000 in exsiccata sets which belonged to Sullivant but were not issued by him, the total collection, excluding hepatics, is estimated at 18,800.) On page iii of this introduction will be found a list of the special collections. It is important to recognize that many bibliographic types of Sullivant are in these separate collections and therefore do not appear in this index. The only one of Sullivant's own exsiccatae in his main herbarium is Musci Alleghanienses.

Mention of some of the larger foreign collections in the herbarium will illustrate its world-wide content. W. P. Schimper sent specimens from 1844 to at least 1867, a total of over 750 species and varieties, and a vast quantity of duplicates. Some of the latter were distributed from the Farlow herbarium and others are still being processed for exchange. On the labels are Schimper's published names, manuscript names cited in synonymy, and manuscript names not taken up.

Over 200 species of South American mosses came from Richard Spruce in 1869. Some are the early version of Musci Amazonici et Andini, with Spruce's, not Mitten's, names. Others are unnamed but numbered as in Mitten's Musci Indiae Orientalis. Still others are without numbers or names. James attempted to process these and many now in the herbarium are labelled by him. Other South American specimens are among the 450 species received from Ernst Hampe in the 1860s.

There is an irregular but interesting set of some 300 species of "Antarctic" mosses received from J. D. Hooker in 1860. Unlike the standard sets, about a third of the labels bear the names of Gunn, Colenso, Oldfield, and others as collectors. The 450 species of mosses from Hooker and Thomson's Herbarium Indiae Orientalis have been separated from the main herbarium, as have the 750 mosses of the United States Exploring Expeditions. Other collections from notable world voyages were acquired from Montagne, whom Sullivant called "a prompt, liberal & generous correspondent." Generous also were Dozy, Molkenboer, and Blume, who sent some 250 species from Java. There are 58 specimens received from Schwaegrichen in 1842, and 19 "types" of Carl Müller, as well as other duplicates from his herbarium.

A notable feature of the herbarium is the wealth of drawings and notes. It is probably safe to say that Sullivant made sketches of every species new to him. Many are finished drawings and some of these are initialed by August Schrader, a draughtsman employed full time by Sullivant from 1856. Many of the notes are by Lesquereux, who was associated with Sullivant from 1848.

It has amused the compilers of this index to come upon common American specimens which Sullivant, when he was learning to identify mosses, sent simultaneously to several European bryologists. In one lot of 50 specimens named by Schwaegrichen, Montagne, and Wilson, these experts disagreed on the correct names of 20.

Martha Abbott participated with me in the rehabilitation of the herbarium and the preparation of the indexes. Carolyn Hesterberg was the expert typist.

Explanation of the Index

Following the list of genera with their sheet numbers, the species are arranged alphabetically, preceded by their sheet numbers and number of specimens, and followed by the genus under which they are filed. Underlined species names include specimens which are judged, merely by the labels, to be in the category of "types." Starred names include authentically named specimens, almost always from the herbarium of the author. Quotation marks are used for names which have apparently remained unpublished. This index is not intended to give nomenclatural status to any of these indications.

Sullivant Moss Collections Kept Separate from his Main Herbarium

1. Sets containing Sullivant types:

Sullivant, Musci Alleghanienses, 1846. 292 numbers. Type set in Sullivant Herbarium; three separate sets.

Sullivant & Lesquereux, Musci Boreali-Americani, Edition 1, 1856. 355 numbers. Two sets; Set I is the type set.

Sullivant & Lesquereux, Musci Boreali-Americani, Edition 2, 1865. 550 numbers. Two sets; Set I is the type set.

Sullivant, Mosses of the United States Exploring Expedition under Wilkes, 1838-42. 270 specimens.

Sullivant, Mosses of the United States North Pacific Exploring Expedition under Ringgold & Rodgers, 1853-1856. 436 specimens.

Sullivant, Musci Cubenses Wrightianae, Collection 1, 1856-1858. Sets 1 and 2. See below for other collections.

Austin, C. F., Musci Appalachiani & Supplement, 1870, 1878. Contains 11 Sullivant species; Sullivant edited the labels of the whole set. This copy has Sullivant manuscript corrections of identifications.

2. Sets from the Sullivant herbarium but identified mostly or wholly by others:

Schrader, A. Musci Venezuelenses, Determ. C. Müller. Legit A. Fendler. Prepared and distributed by August Schrader, 1879. This set has drawings made by Schrader for Sullivant.

Villavicentia, M. Mosses of the River Napo, Ecuador, 1869. Identified by E. G. Bartram, 1933. Set 1 in Farlow General Herbarium; Set 2 in Herb. Bartram.

C. Wright's Second (1864) and Third (1867) Cuban Collections. Identified by Howard Crum, 1960. Drawings by Schrader.

INDEX TO GENERA

- | | | |
|----------------------|------------------------|---------------------------|
| Acaulon 1-9 | Brachystelium 497 | Cryptopodium 1066-1067 |
| Acrocryphaea 10-11 | Brachythecium 498-579 | Cyathophorum 1068-1069 |
| Aerobryum 12-13 | Braunia 580-583a | Cylindrothecium 1070-1095 |
| Alsia 14-21 | Bruchia 584-595 | Cynodontium 1096-1098 |
| Amblyodon 22-23 | Bryum 596-845 | Daltonia 1099-1104 |
| Amblystegium 24-81 | Buxbaumia 846-850 | Dasymitrium 1105 |
| Anacamptodon 82-84 | Calomnion 851 | Dawsonia 1106 |
| Andreaea 85-114 | Calymperes 852-865 | Dendrocinum 1107 |
| Anisothecium 115-116 | Camptothecium 866-874 | Dendropogon 1108-1109 |
| Anoectangium 117-120 | Campylopus 875-932 | Desmatodon 1110-1127 |

| Brachymitrium 494 | Coscinodon 1030-1035 | Ectropothecium 2087-2090 |
| Brachyodus 495-496 | Cryphaea 1036-1065 | Encalypta 2091-2106 |

Endotrichum 2116	Hydropogon 2638	Macromitrium 3310-3361
Entodon 2117-2136	Hylocomium 2639-2662	Meesia 3362-3271
Entosthodon 2137-2159	Hymenodon 2663-2665	Mesonodon 3372
Ephemerum 2160-2171	Hymenostomum 2666	Meteorium 3373-3404
Eremodon 2172	Hylocomium 2667-2669	Micromitrium 3405-3409
Erithrodontium 2172a	Hypnum 2670-3139	Microstegium 3410-3411
Eucamptodon 2173-2175	Hypopterygium 3140-3159	Microthamnium 3412-3413
Eurhynchium 2176-2215	Isothecium 3160-3165	Mielichhoferia 3415-3425
Eustichia 2216-2220	Lepidopilum 3166-3173	Mniadelphus 3426-3428
Fabronia 2221-2242	Leptangium 3174	Mnium 3429-3472
Fissidens 2243-2332	Leptodon 3175-3183	Myurella 3473-3475
Fontinalis 2333-2405a	Leptodontium 3184-3191	Myurum 3476
Funaria 2408-2443	Leptohymenium 3192-3195	Neckera 3477-3549
Garckia 2444	Leptostomum 3196-3203	Ochrobryum 3550
Glyphocarpa 2445-2447	Leptotheca 3205	Octoblepharum 3551-3555
Glyphomitrium 2448-2449	Leptotrichum 3206-3211	Oedopodium 3556
Grimmia 2450-2541	Lepyrodon 3212-3213	Oncophorus 3557
Gymnostomum 2542-2546	Lescurea 3214-3216	Oreas 3558
Haplohymenium 2547	Leskea 3217-3259	Orthodon 3559
Harrisonia 2548-2549	Leucobryum 3260-3278	Orthodontium 3560-3563
Hedwigia 2550-2565	Leucodon 3279-3290	Orthothecium 3564-3568
Helicodontium 2566	Leucomium 3291-3292	Orthotrichum 3569-3681
Helicophyllum 2567-2568	Leucophanes 3293-3295	Paludella 3682-3683
Holomitrium 2569-2574	Limnobium 3296-3305	Phascum 3684-3699
Homalia 2575-2580	Lindigia 3306-3307	Philonotula 3700
Homalothecium 2581-2590	Lophiodon 3308	Phyllogonium 3701-3707
Hookeria 2592-2637	Lyellia 3309	Physcomitrella 3708-3709

Physcomitrium 3710-3725	Rhabodweisia 3959-3963	Thelia 4153-4155
Pilopogon 3726-3729	Rhizogonium 3964-3968	Thuidium 4156-4160
Pilotrichella 3730-3733	Rigodium 3969	Thysanthomitrium 4161
Pilotrichum 3734-3747	Schistidium 3970-3972	Timmia 4162-4164
Plagiothecium 3748-3789	Schistomitrium 3973-3974	Tortula 4165-4187
Platygyrium 3790-3791	Schistostega 3975	Trachyloma 4188
Pleuridium 3792-3805	Schlotheimia 3976-3980	Trachypus 4189
Pogonatum 3806-3809	Sciaromium 3981	Trematodon 4190-4193
Pohlia 3810	Scouleria 3982	Trichodon 4194
Polytrichadelphus 3812-3815	Seligeria 3983-3989	Trichostomum 4195-4230
Polytrichum 3816-3865	Sematophyllum 3990-3997	Voitia 4232
Porotrichum 3866-3868	Sphaerothecium 3998	Wardia 4233
Potamium 3869-3871	Sphagnum 3999-4098	Weisia 4235-4266
Pottia 3872-3889	Spiridens 4099	Zygodon 4267-4285
Prionodon 3890-3894	Splachnum 4100-4107	
Pseudoleskea 3896-3899	Stereodon 4108	
Psilopilum 3900	Stereophyllum 4109-4110	
Pterigynandrum 3901-3903	Streptopogon 4111-4113	
Pterobryum 3904	Stylostegium 4114	
Pterobryopsis 3904a	Symblepharis 4115	
Pterogonium 3905-3909	Syrrhopodon 4116-4131	
Ptychomitrium 3910-3917	Taxithelium 4123	
Pylaisia 3918-3927	Tayloria 4133-4140	
Pyramidula 3928	Tetraphis 4141-4143	
Racomitrium 3929-3948	Tetraplodon 4144-4148	
Racopilum 3949-3955	Thamnium 4151	
Regmatodon 3957-3958	Thedenia 4152
